Application name: WhatsHappenin

Application description:

Feel out of the loop? Our program, WhatsHappenin allows people to drop pins around the world and read local news from that place. More specifically, WhatsHappenin is an interactive news application that will let users explore various local news headlines from any place in the world through picking specific locations in the world. Users will be able to create an account and then proceed to login where they can then access a map page, and choose locations to view headlines relevant to the area. This makes it easy to stay informed about current events happening in specific regions of interest.

For each selected location, the application displays a curated list of articles, allowing users to click on any headline to read the full story. On each article, there is also a comments feature that allows other users to discuss the article and point out interesting information. The app also provides a saved articles feature, giving users the ability to save interesting stories they come across. On the saved articles page, users can view a personalized list of all their saved articles and revisit them at any time. Each article in the list links directly to the original news source, providing seamless access to the content. WhatsHappenin combines the convenience of a map-based interface with curated news, offering users a way to stay informed about the world around them and to satiate one's general curiosity.

Vision Statement: To provide news coverage for your location of interest with a drop of a pin.

Version Control: <https://github.com/lukewu1/WhatsHappenin/tree/main>

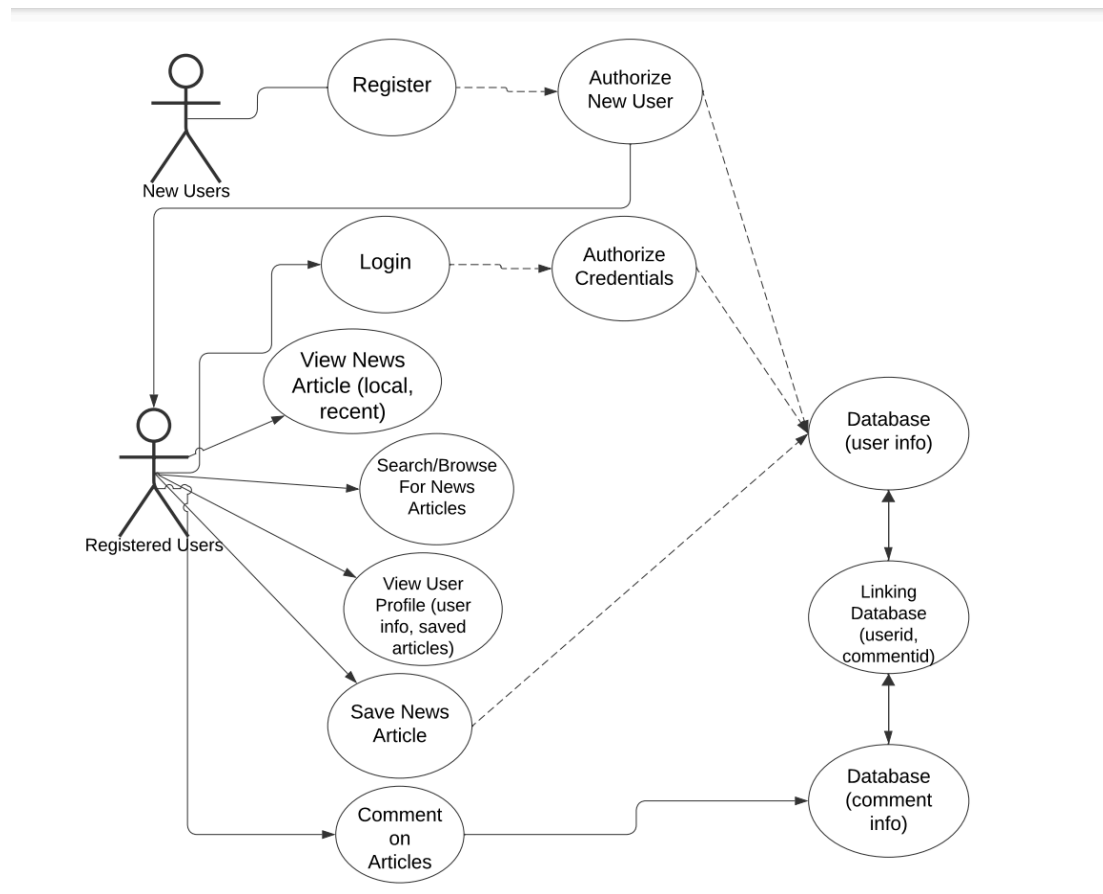

Development Methodology: Agile Scrum

Communication Plan: During the source of this project, we're planning to communicate with each other through Discord and organize/keep track of our work with the GitHub Project Board.

Meeting Plan:

	Day	Time	Location/Modality
Team Meeting	Mondays	6:00 pm start to however long	Discord or CSEL (hybrid)
Weekly Meeting with TA	Mondays	5:45 pm - 6:00 pm	Zoom (online)

Use Case Diagram (at least 6 features):
